

Some people think that it is an important part of a child's education to go on field trips (for example, museums), other people think a child's time is better spent learning in a classroom at school. What is your opinion?

A child can learn a variety of knowledge not only from ~~curricular~~ ^{required} courses but also from the ~~activities out of class~~ ^{extracurricular activities}. ~~Learning at school has~~ ^{There're} empirical teachers to tell you the correct concepts, but they might sometimes be limited in the course field. Going on field trips allow child to derive another information that won't be taught in class, but much still need to be proved their validity. I think child's education should go on more field trips, because child needs to broaden horizons outside the class and cultivates ~~more~~ ^{while learning at school} interests and skills.

Having field trips helps child expand the insight on various fields. Child can learn new information, even understanding the trend in society. When being a senior high student, I liked to register for the participation of enterprise visiting, especially technology production. It is a meaningful thing to realize the operation of a company with large ~~amount~~ ^{numbers} of computers instead of few of them in classroom. ~~In addition,~~ ^{這句感覺是中翻英，很怪...} ~~introducer~~ ^{numbers} always tell us the vision that will be thriving of the future. These are the reasons why child can gain more benefits from field trip than ~~learning in a~~ ^{from} classroom.

Multiple interests and skills outside the class is essential in a child's education. Aside from learning the class knowledge, a child cultivating the second specialization from field trips helps him or her adapt to society more easily in the future. An extracurricular teaching to a concert in elementary school triggered my interest in piano. I actively learned and practiced every day at that time, making me ~~have the~~ ^{be able to} ~~ability to~~ perform randomly today when there is a piano nearby. I was glad that the experience let me step in the music field. So field trips sometimes may have the miracle effect in ~~child~~ ^{children's} education.

Both going on a trip and learning in the class room give much knowledge to a child. Yet, a child could explore more extensive information and have the opportunity to learn new skill when enjoying a field activity.
